

Cumulative Final Quiz Pack

EAM310 · East Asian Medicine Diagnosis I · VUIM Summer 2026

Prof. Daniel Schrier, D.O.M., L.Ac. | Final: Friday, Sept. 11, 2026
Multiple Choice · Styled Like Schrier's Actual Quizzes · Weeks 1–9

TCM for Ballroom Dancers

reMarkable Edition

How to use this quiz pack: Treat this like the real thing — time yourself, don't peek at the Answer Key (last 2 pages) until you've committed to an answer for every question. Review every miss against the Study Guide, not just the correct letter: understand why the wrong options are wrong, not just which one is right. Week 5 is intentionally absent (midterm week, no new content).

1 • Week 1 — Vital Substances

1. Which statement about Pre-Heaven Essence is correct?

- A) It is continuously replenished by diet
- B) It is fixed at conception and cannot be replenished
- C) It is stored primarily in the Spleen
- D) It is the Yang aspect of Zhen Qi

2. A patient presents with distension that is worse than the actual pain, moving pain that comes and goes, and a Wiry pulse. This is most consistent with:

- A) Blood Stasis
- B) Qi Stagnation
- C) Qi Deficiency
- D) Blood Deficiency

3. Which of the following is NOT one of the six functions of Qi?

- A) Warming
- B) Holding
- C) Cooling
- D) Transforming

4. Rebellious Stomach-Qi (ascending instead of descending) typically presents as:

- A) Diarrhea
- B) Organ prolapse
- C) Nausea and belching
- D) Cough and asthma

5. A tongue is bluish-purple and moist. The most likely mechanism is:

- A) Blood stasis from Heat
- B) Blood stasis from Cold
- C) Simple Qi Deficiency
- D) Yin Deficiency with Empty Heat

6. Pitting edema that starts in the abdomen and spreads to the limbs points most to:

- A) Lung Yang Deficiency
- B) Spleen Yang Deficiency
- C) Kidney Yang Deficiency
- D) Liver Qi Stagnation

7. Which Zang organ's spirit is the Hún 魂?

- A) Heart
- B) Spleen
- C) Liver
- D) Kidney

8. "False Shen" in a critically ill patient is best understood as:

- A) A genuine sign of recovery
- B) A sudden final flare of Qi before death, not true improvement
- C) A sign that Excess Heat has resolved
- D) Evidence the diagnosis was incorrect

2 • Week 2 — Eight Principles

1. The single most reliable differentiator between Excess and Deficiency pain is:

- A) Location of the pain
- B) Response to pressure
- C) Time of day it occurs
- D) Whether the tongue is red

2. A patient has fever with no aversion to cold whatsoever. This indicates:

- A) The pathogen is still Exterior
- B) The pathogen has moved to the Interior
- C) A Deficiency–Cold pattern
- D) Nothing diagnostic can be concluded

3. Which finding is characteristic of Empty–Heat rather than Full–Heat?

- A) Redness over the entire face
- B) Thick yellow tongue coating
- C) Malar flush with five–palm heat and night sweats
- D) Strong, Rapid, Full pulse

4. In False Cold/True Heat, which finding would you expect?

- A) Pulse is Deep and Full despite cold limbs; chest and abdomen are hot
- B) Pulse is Floating and Empty
- C) Complexion is dull white like powder
- D) Patient desires to be covered despite feeling hot

5. Collapse of Yang is characterized by all of the following EXCEPT:

- A) Cold limbs
- B) Profuse oily sweating
- C) Constipation and retention of urine
- D) Minute–Deep pulse

6. The Shao Yang stage/pattern is best described as:

- A) Purely Exterior
- B) Purely Interior
- C) Alternating between Exterior and Interior (half–half)
- D) A collapse pattern

3 · Week 3 — Pulse Diagnosis

1. According to the Nan Jing, the Right Chǐ position corresponds to:

- A) Kidney/Bladder
- B) Pericardium/San Jiao
- C) Spleen/Stomach
- D) Lung/Large Intestine

2. A Flooding (Overflowing) pulse appearing in Winter, with no accompanying symptoms explained by the season, should be interpreted as:

- A) Completely normal for that individual
- B) A potential warning sign requiring attention
- C) Diagnostic of Kidney Yang Deficiency only
- D) Impossible to occur

3. Which pulse quality is generally considered a healthy, normal finding?

- A) Slow (Chí)
- B) Slowed–Down/Moderate (Huǎn)
- C) Hidden (Fú)
- D) Scattered (Sàn)

4. A pulse that is Rapid with random, irregular stops (as opposed to regular–interval stops) is called:

- A) Intermittent (Dài)
- B) Knotted (Jié)
- C) Hasty (Cù)
- D) Moving (Dòng)

5. Floating pulse should NOT automatically be diagnosed as Exterior because it can also indicate:

- A) Blood Stasis
- B) Yin Deficiency
- C) Phlegm–Damp
- D) Food retention

6. The Bin Hu Mai Xue system differs from the Nan Jing system primarily in that:

- A)** It doesn't use the Cun/Guan/Chi positions at all
- B)** It uses a simpler Zang-only mapping without paired Fu organs
- C)** It only applies to the left hand
- D)** It was developed after the Shang Han Lun

4 • Week 4 — Tongue Diagnosis

1. A patient recently started antibiotics. What tongue change would you expect?

- A)** Thick black coating
- B)** Peeled patches in the coating
- C)** Deep red tongue tip
- D)** Swollen, tooth-marked body

2. Purple discoloration of the tongue body always indicates:

- A)** Yin Deficiency
- B)** Blood Stasis
- C)** Qi Deficiency
- D)** Exterior invasion

3. A tongue crack located centrally and constitutionally linked to emotional stress or Heart patterns is called:

- A)** The Stomach crack
- B)** The Heart crack
- C)** A Kidney Yin crack
- D)** A Short Diagonal crack

4. Rootless coating (easily wiped off) most directly indicates:

- A)** Stomach Qi/Yin Deficiency
- B)** Excess Damp-Heat
- C)** Full Cold
- D)** Liver Fire

5. Distended and dark sublingual veins point to:

- A)** Qi Deficiency alone
- B)** Yin Deficiency
- C)** Blood Stasis in the Upper Burner
- D)** Cold-Damp

6. A red tongue completely without coating, in a patient with night sweats and five-palm heat, indicates:

- A)** Full-Heat (Excess)
- B)** Empty-Heat (Yin Deficiency)
- C)** Cold pattern
- D)** Normal variation

5 • Week 6 — Diagnosis by Observation

1. On the Su Wen 32 facial map, redness on the patient's LEFT cheek corresponds to:

- A)** Heart
- B)** Liver
- C)** Lung
- D)** Kidney

2. Which of the Five Wheels of the Eye corresponds to the Liver?

- A)** Blood Wheel (canthus)
- B)** Qi Wheel (sclera)
- C)** Wind Wheel (iris)
- D)** Water Wheel (pupil)

3. A sudden brightening of the eyes and complexion in a chronically ill, exhausted patient is best interpreted as:

- A) Genuine recovery
- B) False Shen — a warning sign, not improvement
- C) Normal daily fluctuation
- D) Evidence of Excess Heat resolving

4. Yellow, sticky, greasy vaginal-type coating combined with heat and fullness generally indicates:

- A) Cold-Damp
- B) Damp-Heat
- C) Blood Deficiency
- D) Yin Deficiency alone

5. Wandering Bi Syndrome (pain that moves joint to joint) is caused by which pathogen?

- A) Cold
- B) Damp
- C) Wind
- D) Heat

6. Cold hands and feet with a warm torso most likely indicates:

- A) Simple systemic Cold pattern
- B) Liver Qi Stagnation trapping heat centrally
- C) Kidney Yang Deficiency
- D) Lung Qi Deficiency

7. Non-pitting edema is most associated with:

- A) Yang Deficiency
- B) Qi Stagnation or Dampness
- C) Blood Deficiency
- D) Yin Deficiency

6 • Week 7 — Diagnosis by Inquiry

1. Which of the following is Schrier's "Golden Rule" for the 16 Questions?

- A) Always ask all 16 questions in strict order
- B) Every question should confirm or exclude a specific pattern
- C) Only ask about diet and sleep
- D) Skip the 16 Questions if the tongue is normal

2. A headache at the temples that radiates to the sides of the head suggests involvement of which channel?

- A) Tai Yang
- B) Yang Ming
- C) Shao Yang
- D) Jue Yin

3. Insomnia with restlessness, vivid dreaming, and a sensation of heat is generally:

- A) An Empty pattern from Blood Deficiency
- B) A Full pattern from pathogens agitating Shen/Hun
- C) Always Kidney Yang Deficiency
- D) Not diagnostically significant

4. Night sweats are most associated with:

- A) Yang Deficiency
- B) Yin Deficiency
- C) Qi Stagnation
- D) Excess Cold

5. Sudden tinnitus that is loud, high-pitched, and worse with pressure on the ear suggests:

- A) Kidney Deficiency (Empty)
- B) Liver-Fire, Liver-Yang, or Liver-Wind (Full)
- C) Lung-Qi Deficiency
- D) Spleen-Qi Deficiency

6. Which of the following is NOT one of the three root mechanisms of bleeding?

- A) Excess Heat pushing Blood out
- B) Tension/pressure forcing Blood out
- C) Deficiency failing to hold Blood in
- D) Excess Cold congealing Blood

7 • Week 8 — Diagnosis by Palpation

1. Skin that feels hot on first touch but cools when pressure is sustained indicates:

- A) Interior Heat
- B) Exterior Wind-Heat, still at the Wei level
- C) Empty-Heat from Yin Deficiency
- D) Full Cold

2. Per Ling Shu 74, heat felt on the dorsal (back) surface of the hand indicates:

- A) Empty Heat
- B) Full Heat
- C) Cold pattern
- D) Normal finding

3. On the Nan Jing Five-Phase abdominal map, the area at the navel corresponds to:

- A) Heart/Fire
- B) Spleen/Earth
- C) Kidney/Water
- D) Liver/Wood

4. A "large but empty" Xu Li (apical) pulse most directly suggests:

- A) Excess Lung/Heart
- B) Heart-Qi Deficiency
- C) Normal finding
- D) Shock

5. Front-Mu (alarm) points are generally more associated with treating:

- A) Excess conditions
- B) Deficiency conditions exclusively
- C) Only pediatric patients
- D) Only chronic Bi Syndrome

8 • Week 9 — Diagnosis by Hearing & Smelling

1. Which organ governs the volume of the voice?

- A) Lung
- B) Kidney
- C) Spleen
- D) Liver

2. Sudden loss of voice is most associated with:

- A) Lung-Qi Deficiency
- B) Invasion of Wind-Heat
- C) Lung-Yin Deficiency
- D) Kidney Deficiency

3. Which Five-Element sound corresponds to the Water element?

- A) Shouting
- B) Singing
- C) Weeping
- D) Groaning

4. A loud hiccup is most often due to:

- A) Stomach-Qi Deficiency
- B) Liver-Qi invading the Stomach
- C) Lung-Qi Deficiency
- D) Kidney-Yin Deficiency

5. Fishy-smelling vaginal discharge indicates:

- A) Damp-Heat
- B) Damp-Cold
- C) Blood Stasis
- D) Toxic Heat

6. The classical character for the "Scorched" odor pattern is 焦 (jiāo). Which character appears instead on this course's slide?

- A) 笑 (xiào)
- B) 哭 (kū)
- C) 臭 (chòu)
- D) 香 (xiāng)

7. Putrid-smelling sweat can indicate disease of which organs?

- A) Stomach and Spleen only
- B) Lungs, Liver, or Kidneys
- C) Heart only
- D) Large Intestine only

Answer Key — Weeks 1–4

Week 1 — Vital Substances

#	Ans	Why
1	B	Pre-Heaven Essence is fixed at conception; Post-Heaven Essence is the one continuously replenished by diet.
2	B	More distension than pain, moving, with a Wiry pulse = the Qi Stagnation signature (Blood Stasis would be more pain than distension, fixed).
3	C	"Cooling" isn't one of the six — the six are Transporting, Warming, Protecting, Holding, Transforming, Rising.
4	C	Stomach-Qi should descend; ascending Stomach-Qi = nausea/belching. (Diarrhea=Spleen sinking; prolapse=Spleen-Qi sinking; cough/asthma=Lung/Kidney rebellion.)
5	B	Bluish-purple = stasis from Cold. Reddish-purple would indicate stasis from Heat.
6	B	Starting in the abdomen and spreading to limbs is the Spleen-Yang pattern (face/hands spreading=Lung; legs/ankles=Kidney).
7	C	Hún belongs to the Liver. (Heart=Shén, Spleen=Yì, Kidney=Zhì, Lung=Pò.)
8	B	False Shen is the candle's last flare before going out — not genuine improvement.

Week 2 — Eight Principles

#	Ans	Why
1	B	Deficiency pain is relieved by pressure; Excess pain is aggravated by pressure — the single most reliable test.
2	B	Loss of aversion to cold is the marker that the pathogen has moved from Exterior to Interior.
3	C	Malar flush + five-palm heat + night sweats is the classic Empty-Heat (Yin Deficiency) picture, milder and more localized than Full-Heat.
4	A	In False Cold/True Heat, the pulse is Deep and Full (the true Heat showing through) despite cold limbs, and the chest/abdomen remain hot.
5	C	Collapse of Yang presents with frequent/profuse urination or incontinence — NOT constipation/retention (that's Collapse of Yin).
6	C	Shao Yang is specifically the half-Exterior, half-Interior stage (Schrier's "hot and cold, yes and no" mnemonic).

Week 3 — Pulse Diagnosis

#	Ans	Why
1	B	Right Chǐ = Pericardium/San Jiao in the Nan Jing system (a common trap — it is NOT simply Kidney-Yang/Ming Men).
2	B	A seasonal pulse quality out of its proper season (Flooding in Winter) is a genuine warning sign, not simply normal.

3	B	Huǎn (Slowed-Down/Moderate) is the one qualitatively healthy entry among the 28 pulse qualities.
4	C	Hasty (Cù) = Rapid + random stops. Knotted = Slow + random stops. Intermittent = pauses at regular intervals.
5	B	Floating also appears in Yin Deficiency (Floating+Thin+Rapid with night sweats/five-palm heat), not only Exterior invasion.
6	B	Bin Hu Mai Xue (Li Shizhen) uses a simpler Zang-only mapping, without the paired Fu organs the Nan Jing includes.

Week 4 — Tongue Diagnosis

#	Ans	Why
1	B	Antibiotics create peeled coating patches within days of starting.
2	B	Purple always indicates Blood Stasis, regardless of shade — shade then indicates Heat (reddish) or Cold (bluish) as the cause.
3	B	The Heart crack is the one linked to constitutional Heart-pattern tendency or emotional stress.
4	A	Rootless (easily wiped off) coating = Stomach Qi/Yin Deficiency.
5	C	Distended + dark sublingual veins = Blood Stasis in the Upper Burner.
6	B	Red tongue with NO coating + night sweats/five-palm heat = Empty-Heat from Yin Deficiency (Full-Heat would still have a coating).

Answer Key — Weeks 6–9

Week 6 — Diagnosis by Observation

#	Ans	Why
1	B	Patient's LEFT cheek = Liver on the Su Wen 32 map — the classic mirror-trap quiz item.
2	C	Wind Wheel (iris) = Liver. (Blood=Heart, Qi=Lung, Water=Kidney, Flesh=Spleen.)
3	B	Sudden brightening in a critically ill patient is False Shen — a warning, not recovery.
4	B	Yellow, sticky/greasy with Heat signs = Damp-Heat.
5	C	Wandering Bi = Wind (the "hot dog cart" analogy — pain that isn't anchored anywhere).
6	B	Cold extremities with a warm torso points to Liver-Qi Stagnation blocking Qi from reaching the extremities, not simple systemic Cold.
7	B	Non-pitting edema = Qi Stagnation or Dampness (pitting = Yang Deficiency).

Week 7 — Diagnosis by Inquiry

#	Ans	Why
1	B	Every question should confirm or exclude a specific pattern — never recite the 16 as a rote script.
2	C	Temple pain = Shao Yang channel (Exterior Wind or Liver/GB Fire rising).
3	B	Restless, vivid dreaming, heat = Full pattern (pathogens agitating Shen/Hun out of Blood).
4	B	Night sweats = Yin Deficiency.
5	B	Sudden, loud, worse with pressure = Full pattern (Liver-Fire/Yang/Wind).
6	D	"Excess Cold congealing Blood" is a Blood Stasis mechanism, not one of the three bleeding mechanisms (Heat pushing, tension forcing, deficiency not holding).

Week 8 — Diagnosis by Palpation

#	Ans	Why
1	B	Hot-then-cooling-with-pressure = Exterior Wind-Heat still at the Wei (exterior) level.
2	B	Per Ling Shu 74: dorsal (back of hand) heat = Full Heat; palm heat = Empty Heat.
3	B	The navel corresponds to Spleen/Earth on the Nan Jing Five-Phase map.
4	B	"Large but empty" Xu Li = Heart-Qi Deficiency.
5	A	Front-Mu points are more associated with Excess conditions (though also used for Deficiency in some contexts); Back-Shu is the stronger Deficiency-treating set.

Week 9 — Diagnosis by Hearing & Smelling

#	Ans	Why
---	-----	-----

1	B	Kidney governs the volume of the voice (root of Yuan Qi). Lung governs production.
2	B	Sudden loss of voice = invasion of Wind-Heat. (Gradual loss = Lung-Qi/Yin Deficiency.)
3	D	Groaning corresponds to Water. (Shouting=Wood, Laughing=Fire, Singing=Earth, Weeping=Metal.)
4	B	A loud hiccup is a Full pattern, most often from Liver-Qi invading the Stomach.
5	B	Fishy smell = Damp-Cold. (Strong/leathery smell = Damp-Heat.)
6	A	The slide uses 笑 (xiào) where the classical character should be 焦 (jiāo) — flagged for confirmation with Prof. Schrier.
7	B	Putrid-smelling sweat can indicate disease of the Lungs, Liver, or Kidneys.
