

EAM310 • EAM DIAGNOSIS I • VUIM • SUMMER 2026

Pre-Lecture Analysis Sheet

Week 8 • Diagnosis by Hearing & Smelling — 聞診 (Wén Zhén)

Prof. Daniel Schrier, D.O.M., L.Ac.

Week 8 • Summer 2026

How to use this sheet:

Before lecture → complete Sections A–D and the pre-lecture case questions. Rate your confidence honestly.

During lecture → annotate directly — add answers, corrections, and new insights in the lined spaces.

After lecture → complete Section F, update confidence ratings, and finish the clinical case.

A · Learning Targets — I Can Statements

Rate your confidence **before** lecture (Pre) and **after** lecture (Post) by circling a number 1–5 in each column. 1 = can't do it yet · 5 = fully confident

I Can Statement	Pre-Lecture Confidence	Post-Lecture Confidence
Explain what 聞診 (Wén Zhén) is and distinguish its two components — diagnosis by Hearing and diagnosis by Smelling.	PRE ①②③④⑤	POST ①②③④⑤
Differentiate the three Zang-Fu voice relationships (Lung, Kidney, Spleen & Stomach) and state what aspect of the voice each one governs.	PRE ①②③④⑤	POST ①②③④⑤
Identify the Five Element voice sounds (shout, laugh, sing, weep, groan) and their correct elemental pairing.	PRE ①②③④⑤	POST ①②③④⑤
Differentiate Full/Heat vs. Empty/Cold presentations of voice, breathing, and abnormal respiration (asthma, wheezing, panting).	PRE ①②③④⑤	POST ①②③④⑤
Differentiate Full vs. Empty patterns across cough, vomiting, hiccup, belching, and borborygmi.	PRE ①②③④⑤	POST ①②③④⑤
State the two main aspects of Diagnosis by Smelling and the general Heat/Excess vs. Cold/Deficient smell rule.	PRE ①②③④⑤	POST ①②③④⑤
Apply the Five Element odors to interpret breath, sweat, sputum, stool/flatulence, urine, and vaginal discharge findings.	PRE ①②③④⑤	POST ①②③④⑤

B · Activate — Connect to What You Know

B1 · From Week 7 to Today

Week 7 covered Diagnosis by **Palpation** (切診) — the tactile exam of Front-Mu & Back-Shu points, the abdomen, and the pulse. Today covers the second of the Four Pillars, **Hearing & Smelling** (聞診) — together they complete the full sequence: 望聞問切 (Look · Listen/Smell · Ask · Palpate).

What do you already know about diagnosing by sound or smell? Write whatever comes to mind — voice, breathing, body odor, anything:

B2 · Connect the Dots

How might each of these presentations relate to today's material? Complete the connections:

Loud, coarse breathing → Full or Empty pattern? Why?

Foul, strong-smelling secretions → Heat/Excess or Cold/Deficient?

Weak voice with reluctance to talk → which pattern(s)?

Fishy or odorless secretions → Heat/Excess or Cold/Deficient?

C · Vocabulary Pre-Load — Define Before Class

Fill in your definition/clinical note before lecture. Refine it during and after class.

Character	English	My Definition / Clinical Note
聞診 Wén Zhěn	Diagnosis by Hearing & Smelling	2nd of the Four Diagnostic Methods (望聞問切)
呼 Hū	Shout (voice sound)	Wood-element voice sound — forcefulness, assertion
笑 Xiào	Laugh (voice sound)	Fire-element voice sound — expression of joy
唱 Chàng	Sing (voice sound)	Earth-element voice sound — soothing, wide pitch variation
咳嗽 Ké Sòu	Cough	Lung qi rising counterflow + Phlegm/Qi flooding the airways
嘘 Xū	"Xu" Healing Sound	Liver — removes heat, clears blockages, brightens the eyes
呬 Sì	"Si" Healing Sound	Lung — moderates stress, calms qi, moistens the lungs
吹 Chuī	"Chui" Healing Sound	Kidney — removes wind-cold, urges stagnant qi
餿 Sōu	Rancid odor	Fat no longer fresh / newly-mown grass, unpleasant
腐 Fǔ	Putrid odor	Rotting meat / stagnant water smell

HEADS UP

The "Scorched" odor slide labels its sound as **xiào** 笑 — the same character used for "Laugh" on the Five Element Sounds slide. Classically the Fire-element scorched odor is **jiāo** 焦, a different character. This looks like a copy/paste label on the lecture slide — flag it and confirm with Prof. Schrier rather than memorizing 笑 for "scorched."

D · Anticipatory Questions — Answer During Lecture

These questions preview exactly what the lecture will teach. Leave blank before lecture — fill in the answers as the material is covered. Come back and expand after class.

Voice & the Organs 聲音與臟腑

Q1 · THE THREE VOICE ORGANS

Which three Zang-Fu organs govern the voice, and what specific aspect does each one control — production, volume, or strength?

Hint: Lecture slides 736–738 (Voice and Lung/Kidney/Spleen-Stomach Relationship).

Q2 · VOICE VOLUME & PATTERN MATCH ★

Match each vocal presentation to its pattern — loud voice, weak voice, reluctance to talk, sudden loss of voice, gradual loss of voice. Fill in the table:

Vocalization	Pattern
Loud voice	
Weak voice	
Reluctance to talk	
Sudden loss of voice	
Gradual loss of voice	

Hint: Lecture slide 747 (Voice Abnormal Vocalizations).

Q3 · HOARSENESS BY ONSET

What differentiates the four types of hoarseness by onset, timing, and accompanying sensation (exterior, blood stagnation, phlegm-heat, and Lung/Kidney Yin deficiency)?

Hint: Lecture slide 748 (Abnormal Vocalizations: Hoarseness).

Breathing & Abnormal Respiration 呼吸

Q4 · BREATHING VOLUME & DEPTH

Contrast coarse/loud breathing with weak/thin breathing — which organs are implicated in "deep breathing" (excess) vs. "weak breathing" (deficient) patterns?

Hint: Lecture slides 749–750 (Breathing).

Q5 · EXCESS VS. EMPTY RESPIRATION ★

Complete the table distinguishing Excess/Heat vs. Empty/Cold patterns of Respiration by sound, breath quality, and onset:

Feature	Excess / Heat	Empty / Cold
Sound of respiration		
Breath quality		
Onset		

Hint: Lecture slide 750 (Respiration).

Q6 · ABNORMAL RESPIRATION TYPES

Differentiate Asthma, Wheezing, Upper Stifling, and Shortness of Breath by their underlying Lung-qi mechanism.

Hint: Lecture slide 752 (Abnormal Respiration).

Digestive & Reflexive Sounds 消化道聲音

Q7 · VOMITING, BELCHING & HICCUP ★

All three share the same root mechanism — what is it, and how does each one differ in presentation and sound?

Hint: Lecture slide 758 (Vomiting, Belching and Hiccups comparison table).

Q8 · BORBORYGMI VOLUME RULE

How does the volume of Borborygmi (loud vs. low) differentiate Full from Empty patterns, and which organs are implicated in the low-sound (Empty) presentation?

Hint: Lecture slide 759 (Borborygmi).

Q9 • SIGHING — TWO ROOTS

What emotional and organ associations differentiate Sighing due to Liver–Qi stagnation from Sighing due to Spleen/Heart deficiency?

Hint: Lecture slide 761 (Sighing).

Five Element Sounds 五音

Q10 • FIVE ELEMENT SOUND MAP ★

Complete the Five Element Sound correspondences — which sound pairs with which element? Give the pinyin and hanzi where shown in lecture:

Element	Sound	Pinyin / Hanzi
Wood		
Fire		
Earth		
Metal		
Water		

Hint: Lecture slides 740–746 (Five Element Sounds & individual sound slides).

Diagnosis by Smelling 嗅診

Q11 • TWO ASPECTS OF SMELLING

What are the two main aspects of Diagnosis by Smelling, and what does each one tell the practitioner about the patient?

Hint: Lecture slide 764 (Diagnosis by Smelling).

Q12 • THE GENERAL SMELL RULE ★

State the general rule: what does a strong/foul odor indicate vs. an absent/fishy odor? Apply it by filling in Breath, Sweat, and Sputum:

Secretion	Strong/Foul indicates...	Fishy/Odorless indicates...
Breath		
Sweat		
Sputum		

Hint: Lecture slides 764, 775–777.

Q13 • STOOL & FLATULENCE ODORS

Compare the four Stool & Flatulence odor patterns (Damp–Heat, food stagnation, Liver–qi stagnation, ST/LI qi deficiency) — what is the differentiating clinical picture for each?

Hint: Lecture slide 778 (Stool & Flatulence).

E • Clinical Case — Apply It Before & After

Case Vignette: Mr. Alvarez, 38 years old

Mr. Alvarez presents with a **3-day history of a loud, productive cough** with thick yellow sputum that has a strong, rotten smell. His voice is hoarse, but his speech is **loud and rapid** — he frequently interrupts himself. He reports **foul-smelling sweat** and says his breath has been unusually bad, described by his wife as “rotten.” He denies chills, **prefers cold drinks**, and his stools are **foul-smelling with a burning sensation** on passing. Pulse is **rapid and forceful** (數而有力 Shuò ér yǒu lì).

Loud, productive cough

Sputum: thick yellow, foul

Sweat: foul odor

Breath: described as “rotten”

Prefers cold drinks

Stool: foul, burning

Pulse: 數而有力 Shuò ér yǒu lì

Pre-Lecture Questions — Answer Based on Your Current Knowledge

Before the lecture, do your best with these. Guessing is fine — it primes your brain to receive the lecture material.

PRE · Q1

Based on volume and sound alone, is Mr. Alvarez’s presentation more consistent with a Full or Empty pattern? What sign supports this?

PRE · Q2

Which single sign (breath odor) most strongly suggests Heat, according to the general smell rule?

PRE · Q3

Circle: COLD — HEAT. List the inquiry evidence (drink preference, stool quality) supporting your choice.

Post-Lecture Questions — Complete After Class

POST · Q1

State Mr. Alvarez’s complete pattern using proper TCM terminology (e.g., “Phlegm-Heat in the Lung” or more specific).

POST · Q2

Which sputum finding (color/smell) and which cough quality confirm Phlegm-Heat rather than a simple Excess cough?

POST · Q3

If untreated and this Excess-Heat pattern began to consume Yin over time, what NEW hearing/smelling signs might emerge in the voice, breath, and sweat?

F · After-Lecture Synthesis & Self-Monitoring

Complete this section within 24 hours of lecture for maximum retention.

I Can Now Confidently...	Still Unclear — I Need to Review...	Connected to Other Learning...

Five Element Sounds — 五音 Wǔ Yīn

Complete the map using only what you can recall. Two are filled in as examples:

WOOD	FIRE	EARTH	METAL	WATER
呼 Hū Shout	笑 Xiào Laugh			

Homework Tracker

Task 1: Build a comparison table of Full vs. Empty presentations across Voice, Breathing, and Digestive sounds (cough / vomiting / hiccup / belching / borborygmi) using today's slides — cross-check against the Cram Sheet once posted.

Task 2: Over 3 days, note one bodily “sound” or “smell” observation about yourself or someone you live with (breath, sweat, cough, etc.) and record which pattern it might suggest. This is a practice-observation exercise, not a self-diagnosis.

Notes on observations / logistics:
