

Quiz Pack

116 Questions · True/False · Multiple Choice · Fill-in-Blank · Matching · Active Recall · Full Answer Key
Week 6 · Inspection (Observation) · Lecture 6

Scope note: Constitutional Types (Section 14 of the Study Guide) is flagged as unconfirmed for this quiz — see the Study Guide cover. This Quiz Pack covers everything else at full weight, plus a light Constitution set at the end you can skip if Prof. Schrier confirms it's not tested.

[Print Edition](#)

How to use this pack: Take the parts in order — built easy → hard on purpose. Close every source before starting. Part B and Part C mirror the exact self-test formats from both professors' slides (fill-in-the-blank, comparison-table completion) — if the quiz uses either format, this is your closest rehearsal.

Target scores: Part A: 90%+ (if lower, the base isn't set) · Part B/C: 85%+ · Part D/E: 80%+ · 80%+ overall means genuinely ready.

PART A · Active Recall — Write From Memory

Heads Up — Cover all source material. Answer from memory. Check against the Answer Key at the back — recognition is not recall.

1. State the Zang-Xiang principle in one sentence.

2. List all four diagnostic methods and what each one uses.

3. What does Shen indicate, and what two things is it reflected in (per the eyes specifically)?

4. List all five colors of the face and their general indication (not the variants — just the core reading).

5. What is the general rule for secretions/excretions by color (2 readings)?

6. Name all five wheels of the eye, their eye structure, and their organ.

7. What organ does the Right Chi pulse position pair with, and what is the common teaching error to avoid?

8. List the two valid organ associations for the nose and which framework each comes from.

9. Name the three yin organs implicated in edema by location, and where each starts.

10. What organ opens to the ear, and what does long vs. short earlobes indicate?

11. State the high-pitch vs. low-pitch tinnitus organ pairing and the mnemonic for each.
-
-
12. What do teeth reflect, and what is the general reading of white/moist vs. dry/no-sheen teeth?
-
-
13. State the four axes of the Excreta & Secretions quiz-yourself framework.
-
-
14. List the four severity gates of Infant Finger Venous Diagnosis, in order.
-
-
15. What sex uses which hand for Infant Finger Venous Diagnosis, and why (per lecture)?
-
-
16. State the Su Wen 32 face map in full (all five regions and organs), and explain the mirroring convention.
-
-
17. Differentiate Having Shen, Loss of Shen, and False Shen across at least three observation categories.
-
-
18. What is the significance of False Shen clinically? Why is it dangerous to mistake it for recovery?
-
-
19. List all five skin lesion types and one distinguishing feature of each.
-
-
20. State the three main causes of a weak constitution per Ling Shu 54.
-
-

PART B • True / False

Heads Up — Mark each statement T or F. About a third are deliberately false — including a few classic trap statements. Don't pattern-match; check each one.

#	Statement	Answer
1.	Yin deficiency causes cold signs like slow movement.	T / F
2.	The Right Chi pulse position pairs with the Kidney.	T / F
3.	In the Five Wheels, the Water Wheel (pupil) corresponds to the Kidney.	T / F
4.	A malar (cheek) flush with tidal fever indicates excess-type Yang heat.	T / F
5.	High-pitched tinnitus (like cicadas) indicates the Liver.	T / F
6.	Su Wen 32's face map uses the viewer's own left/right, not the patient's.	T / F

7.	Slow nail bed blanch return indicates sufficient Qi and Blood.	T / F
8.	Purple lips can only indicate a cold pattern.	T / F
9.	A chronic, dry, non-swollen red throat can indicate Yin-deficiency empty heat.	T / F
10.	Edema starting in the lower body/feet points to the Kidney.	T / F
11.	The Flesh Wheel of the eye (eyelids) corresponds to Spleen/Stomach.	T / F
12.	False Shen is a sign of genuine clinical recovery.	T / F
13.	Yellow tongue/nasal findings always indicate heat, never damp.	T / F
14.	The infant finger venous diagnosis technique is reliable on adults.	T / F
15.	Left index finger is examined for boys in infant finger venous diagnosis.	T / F
16.	Prof. Schrier's own slide deck devotes real space to Constitutional Types.	T / F
17.	A blue line between teeth and gums indicates mercury poisoning.	T / F
18.	Deep, dark yellow-brown eye color indicates Blood stasis.	T / F

PART C • Multiple Choice

Heads Up — Standard 4-option format. Distractors are drawn from real adjacent content, not random wrong answers — read all four before picking.

1. A patient has a malar (cheek) flush only, with tidal fever and night sweats. This indicates:
A. Excess-type Yang heat
B. Yin-deficiency heat
C. Cold-damp
D. Blood stasis
2. Which pulse position pairs with Pericardium/San Jiao, not Kidney?
A. Left Cun
B. Left Chi
C. Right Cun
D. Right Chi
3. The Wind Wheel of the eye corresponds to which structure and organ?
A. Sclera / Lung
B. Iris / Liver
C. Pupil / Kidney
D. Eyelids / Spleen
4. Su Wen 32's face map assigns the Right cheek (patient's own) to which organ?
A. Liver
B. Heart
C. Spleen
D. Lung
5. A slow nail bed blanch return indicates:
A. Sufficient Qi and Blood
B. Exhaustion of Qi and Blood
C. Normal aging
D. Excess heat

6. High-pitched tinnitus (like cicadas) points to which organ?
- A. Kidney
 - B. Liver
 - C. Heart
 - D. Spleen
7. A chronic, dry throat that is NOT swollen or red most likely indicates:
- A. Wind invasion (exterior)
 - B. Interior Stomach heat
 - C. Lung/Kidney Yin deficiency, empty heat
 - D. Toxic heat in Stomach/LI
8. Which of the following describes False Shen?
- A. Genuine clinical improvement
 - B. A sudden brightening warning sign in a critical patient
 - C. Normal healthy vitality
 - D. A sign of excess Yang
9. Edema that starts in the four limbs/torso points to which organ?
- A. Lung
 - B. Kidney
 - C. Spleen
 - D. Liver
10. "Slow movement + feeling of cold" is best classified as:
- A. Yin deficiency
 - B. Yang deficiency
 - C. Excess Yang
 - D. Blood stasis
11. A blue line between the teeth and gums indicates:
- A. Stomach fire
 - B. Kidney deficiency
 - C. Mercury poisoning
 - D. Blood deficiency
12. Which infant finger venous gate indicates a life-threatening condition?
- A. Wind Gate only
 - B. Qi Gate
 - C. Life Gate
 - D. Past the Life Gate to the fingertip

PART D • Fill-in-the-Blank — Excreta & Secretions

Heads Up — This is Prof. Schrier's exact self-test slide format. Fill in every blank before checking the key.

#	Item	Answer (fill in)
1.	Color: White	_____
2.	Color: Yellow	_____
3.	Quantity: Scanty	_____
4.	Quantity: Profuse	_____
5.	Quality: Formed	_____
6.	Quality: Formless	_____

7.	Quality: Thick	-----
8.	Quality: Thin	-----
9.	Odor: No odor	-----
10.	Odor: Strong odor	-----

PART E · Comparison Table Completion — Five Colors of the Face

Heads Up — This mirrors the homework assignment given in lecture verbatim: build a comparison table of the five colors with TCM term and case example. Fill in the blank cells.

Face Color	TCM Term / Indication	Case Example (fill in)
Red (entire face)	-----	-----
Red (malar/cheek flush only)	-----	-----
Pale, bright white + puffy	-----	-----
Yellow, bright orange	-----	-----
Yellow, smoky dark	-----	-----
Blue-green, pale w/ blue tinge	-----	-----
Dark grey/black, w/ lumbar soreness	-----	-----

Su Wen 32 Face Map Completion

Face Region	Organ (fill in)
Left cheek (patient's)	-----
Forehead	-----
Nose	-----
Right cheek (patient's)	-----
Chin	-----

PART F · Matching Sets

Heads Up — Match each item on the left to its organ/pattern on the right. Each answer used once unless noted.

Five Wheels of the Eye

Item	Answer	Options
1. Blood Wheel	-----	A. Kidney
2. Qi Wheel	-----	B. Liver
3. Wind Wheel	-----	C. Lung
4. Water Wheel	-----	D. Spleen/Stomach
5. Flesh Wheel	-----	E. Heart

Tinnitus & Vein-Color (mixed set)

Item	Answer	Options
1. High-pitch tinnitus	-----	A. Kidney
2. Low-pitch tinnitus	-----	B. Liver
3. Bright red infant vein	-----	C. Heat
4. Purple infant vein	-----	D. Wind
5. Green/dark blue infant vein	-----	E. Stronger heat/stasis

Edema Location

Item	Answer	Options
1. Edema starting upper body/head	-----	A. Spleen
2. Edema starting lower body/feet	-----	B. Lung
3. Edema starting four limbs/torso	-----	C. Kidney

Deranged Shen Vocabulary

Item	Answer	Options
1. Fán zào	-----	A. Yang madness (raving, aggression)
2. Zàng zào	-----	B. Irritability/restlessness, hot sensation
3. Bái hé bìng	-----	C. Chronic depression, sleepwalking, anorexia
4. Diān	-----	D. Visceral agitation, crying spells, yawning
5. Kuáng	-----	E. Yin madness, inappropriate laugh/cry

PART G · Short Answer — Broad Coverage

Heads Up — Mixed short-answer covering Nose, Ears, Teeth/Gums/Lips/Throat, Hair/Nails/Skin, and Pediatric Diagnosis.

1. A patient has a greenish bridge of the nose. What pattern does this indicate?

2. Epistaxis with excess heat pushes blood out of the vessels — which two organs does this heat attack?

3. A patient's ears are dry, withered, and burnt black, in the context of a chronic severe illness. What's the pattern?

4. What does purulent ear discharge ("Tin Er") indicate, and which two organs?

5. A patient's teeth are gray and black, like a black bean. What does this indicate?

6. Deviated or missing teeth growth is linked to insufficient Qi of which channel/organ pairing, and why (what tissue holds the teeth)?

7. A patient has purple lips. What are the two possible underlying causes, and how do you distinguish them by additional signs?

8. What is the difference in presentation between mouth remaining open with high fever vs. mouth slightly open?

9. A throat is chronically sore and dry but NOT swollen or red. What pattern, and which two organs?

10. State the difference between a papule and a macule.

11. What does premature graying of the hair indicate, vs. dull/brittle hair?

12. A patient's nail bed blanches white with pressure and returns to color slowly. What does this indicate?

13. What do bluish veins on the thenar eminence indicate, and what organ does the thenar eminence reflect?

14. In infant finger venous diagnosis, what does it mean if the vein is visible all the way to the Life Gate but not beyond?

15. What is the significance of False Shen in a critical-condition patient, and what should a practitioner NOT mistake it for?

PART H · Constitutional Types (Optional/Flagged)

Heads Up — Skip this part if Prof. Schrier confirms constitutions are not tested. Included because his own deck devotes real space to it.

1. List the five Element body types and one distinguishing physical feature of each.
-
-
2. What constitutional markers (per Ling Shu 54) distinguish a weak vs. strong constitution at the eyes/nose/ears/mouth?
-
-
3. What three factors determine an individual's constitution at the time of conception and during pregnancy?
-
-
4. Constitution is not entirely fixed — what is the basis (Pre-Heavenly) and what can improve it (Post-Heavenly)?
-
-

ANSWER KEY

Part A — Active Recall

#	Answer
1	Internal organ states manifest on the body surface — what's inside shows on the outside.
2	Inspection (eyes: vitality/color/appearance/secretions), Auscultation & Olfaction (ears+nose), Inquiry (verbal questioning), Palpation (touch, incl. pulse).
3	Vitality/spirit; reflected in the eyes and complexion, plus tongue and pulse.
4	Red=heat, Pale/White=cold/blood-deficiency, Yellow=deficiency/damp, Blue-Green=cold/pain/stagnation, Dark Grey/Black=kidney-deficiency/blood-stasis.
5	Clear/white = deficiency and cold. Turbid/yellow = excess and heat.
6	Blood Wheel=canthus=Heart; Qi Wheel=sclera=Lung; Wind Wheel=iris=Liver; Water Wheel=pupil=Kidney; Flesh Wheel=eyelids=Spleen/Stomach.
7	Pericardium/San Jiao — NOT Kidney directly (common simplified-teaching error).
8	Five-phase correspondence (Lung), and facial maps — both Su Wen center-of-face and Ling Shu bridge-of-nose (Spleen).
9	Lung (upper body/head), Kidney (lower body/feet), Spleen (four limbs/torso).
10	Kidney; long+full earlobes = strong constitution, small/short = poor constitution.
11	High-pitch = Liver (like cicadas). Low-pitch = Kidney (like rushing water).
12	Kidney (teeth = surplus of bone); white/moist/bright = strong Kidney Qi, dry/no sheen = Kidney Yin decline.
13	Color, Quantity, Quality, Odor.
14	Wind Gate (mild) → Qi Gate (interior, stronger) → Life Gate (severe) → past the tip (life-threatening).
15	Left index finger for boys, right index finger for girls.
16	Left cheek=Liver, Forehead=Heart, Nose=Spleen, Right cheek=Lung, Chin=Kidney — all patient's own left/right; face-forward diagrams mirror this (patient's left appears on the viewer's right).
17	Having Shen: bright/moist complexion, alert eyes, clear speech, quick response, even respiration. Loss of Shen: dim/dull, blurred vision, unconscious/delirious, sluggish, rapid/feeble respiration. False Shen: dull-then-sudden brightening across all categories.
18	It's a critical-condition warning sign — a sudden brightening/clarity in an otherwise declining patient. Don't mistake it for genuine recovery.
19	Papule=raised/red/seed-sized, fades w/ pressure. Macule=flat/red patch, doesn't fade w/ pressure. Blister=fluid-filled. Nodule=solid/palpable/round. (Any 4 with distinguishing features.)
20	Parents' general health, health at time of conception, mother's health during pregnancy.

Part B — True/False

#	Ans	Why (if false)
1	F	Yin deficiency causes HEAT signs (five-center heat, night sweats). Yang deficiency causes cold.
2	F	Right Chi pairs with Pericardium/San Jiao, not Kidney directly.
3	T	—
4	F	Malar flush + tidal fever indicates Yin-deficiency heat, not excess Yang heat.
5	T	—
6	F	It uses the PATIENT'S own left/right — face-forward pictures are mirrored.

7	F	Slow return indicates EXHAUSTION of Qi and Blood; immediate return indicates sufficiency.
8	F	Purple lips can indicate cold OR Blood stasis (stabbing pain) — must distinguish by other signs.
9	T	—
10	T	—
11	T	—
12	F	False Shen is a critical-condition warning sign — a sudden brightening before decline, NOT recovery.
13	F	Yellow indicates deficiency/damp in general; only bright/orange yellow leans heat-predominant.
14	F	It is infant-only (age <3) and does not show reliably on adults.
15	T	—
16	T	—
17	T	—
18	T	—

Part C — Multiple Choice

#	Answer
1	B. Yin-deficiency heat
2	D. Right Chi
3	B. Iris / Liver
4	D. Lung
5	B. Exhaustion of Qi and Blood
6	B. Liver
7	C. Lung/Kidney Yin deficiency, empty heat
8	B. A sudden brightening warning sign in a critical patient
9	C. Spleen
10	B. Yang deficiency
11	C. Mercury poisoning
12	D. Past the Life Gate to the fingertip

Part D — Fill-in-the-Blank (Excreta & Secretions)

#	Item	Answer
1	Color: White	Cold
2	Color: Yellow	Heat
3	Quantity: Scanty	Deficiency / heat
4	Quantity: Profuse	Cold
5	Quality: Formed	Excess
6	Quality: Formless	Deficiency
7	Quality: Thick	Excess / heat
8	Quality: Thin	Deficiency / cold

9	Odor: No odor	Cold
10	Odor: Strong odor	Heat

Part E — Five Colors & Su Wen 32 (reference — see Study Guide Sections 3 & 12 for full case-example language)

Face Color	TCM Term / Indication
Red (entire face)	Full/Excess-type yang heat
Red (malar/cheek flush only)	Yin-deficiency heat
Pale, bright white + puffy	Yang Qi deficiency
Yellow, bright orange	Yang jaundice (damp-heat)
Yellow, smoky dark	Yin jaundice (cold-damp)
Blue-green, pale w/ blue tinge	Excess yin/cold w/ severe pain
Dark grey/black, w/ lumbar soreness	Kidney Yang insufficiency

Face Region	Organ
Left cheek (patient's)	Liver
Forehead	Heart
Nose	Spleen
Right cheek (patient's)	Lung
Chin	Kidney

Part F — Matching Sets

Set	Answers
Five Wheels	1-E (Heart), 2-C (Lung), 3-B (Liver), 4-A (Kidney), 5-D (Spleen/Stomach)
Tinnitus & Vein-Color	1-B (Liver), 2-A (Kidney), 3-C (Heat), 4-E (Stronger heat/stasis), 5-D (Wind)
Edema Location	1-B (Lung), 2-C (Kidney), 3-A (Spleen)
Deranged Shen	1-B (Fán zào), 2-D (Zàng zào), 3-C (Bái hé bìng), 4-E (Diǎn), 5-A (Kuáng)

Part G — Short Answer (key points)

#	Key Point
1	Liver Qi stagnation.
2	Lung and Stomach.
3	Kidney essence consumed, cannot nourish upward.
4	Damp-heat of Liver & Gallbladder.
5	Exhaustion of Yin and Yang.
6	Yangming Qi (Stomach/LI wrap the mouth/gums = Flesh/Earth); not enough Earth Qi to hold teeth in place.
7	Retention of cold OR blood stagnation; distinguish by cold signs (limbs, pain character) vs. stasis signs (stabbing pain, dark tongue).
8	Remains open + high fever/red face/thirst/canker sores = Excess heat. Slightly open = Deficiency pattern.
9	Lung and/or Kidney Yin deficiency with empty heat.
10	Papule: raised, red, seed-sized, color fades with pressure. Macule: flat, red patch, clear edges, color does NOT fade with pressure.

11	Premature graying = depletion of Kidney essence. Dull/brittle hair = Liver Blood deficiency (or Kidney essence deficiency).
12	Exhaustion of Qi and Blood.
13	Cold in the Stomach; thenar eminence reflects the Stomach (via the Lung channel).
14	Interior condition, stronger illness (not yet severe/life-threatening).
15	It's a warning sign of impending collapse, not genuine recovery — don't mistake sudden brightening for improvement.

Part H — Constitutional Types (optional)

#	Key Point
1	Wood=tall/sinewy/greenish. Fire=curly hair/red complexion. Earth=round face/big head/yellowish. Metal=square face/pale. Water=dark complexion/big head/wrinkles.
2	Weak: close-together features, narrow/flared nose, short philtrum, thin cheeks, flat/sunken jaw, small short earlobes. Strong: well-proportioned, broad forehead, long philtrum, full cheeks, strong jaw, long earlobes.
3	Parents' general health, health at conception, mother's health during pregnancy.
4	Pre-Heavenly = Jing (Kidney) essence, the basis. Post-Heavenly = Qi from diet/lifestyle/herbs/acupuncture/yang sheng practices, which can improve constitution over time.
