Topics Covered

▶ Jīng — Three Types

▶ Sù Wèn Cycles 7 & 8

▶ Qì Formation Flow

▶ All 10 Types of Qì

▶ 6 Functions of Qì

▶ Qì Pathologies × 4

▶ Blood Patterns × 4

▶ Qì Stagnation vs Blood Stasis

▶ Jīn vs Yè

▶ All 11 Phlegm Types

▶ Five Shén + BL Points

▶ False Shén (terminal sign)

▶ Eight Principles Framework

▶ Interior vs Exterior

▶ Maciocia Tables 30.1–30.3

▶ Six Exogenous Factors

▶ Seven Emotions

▶ Secondary Pathogens

Section A — Vital Substances · Multiple Choice

Questions 1–18

Which of the following statements about Pre-Heaven Essence (先天精) is CORRECT?

Q1

- A) It can be significantly replenished through diet and herbs
- B) It is fixed in quantity and quality and cannot be replenished
- C) It is formed after birth from food and fluids
- D) It is stored primarily in the Liver

According to Sù Wèn Chapter 1, at what age does a female reach peak fertility (sinews and bones strong, hair at full length)?

Q2

- A) Age 21
- B) Age 28
- C) Age 35
- D) Age 14

The Qì activated during acupuncture needling is:

Q3

- A) Wèi Qì (衛氣)
- B) Yuán Qì (原氣)
- C) Yíng Qì (營氣)
- D) Zōng Qì (宗氣)

Wèi Qì circulates how many times in the body in a 24-hour period?

Q4

- A) 25 times (all during daytime)
- B) 50 times (25 day, 25 night)
- C) 100 times total
- D) 12 times (following the organ clock)

A patient presents with: stabbing, fixed pain in the lower abdomen, dark menstrual blood with clots, amenorrhoea, and a purple tongue on the sides. The MOST likely diagnosis is:

Q5

- A) Qì Stagnation
- B) Blood Deficiency
- C) Blood Stasis (Liver)
- D) Heat in Blood

Which function of Qì is primarily responsible for preventing organ prolapse (e.g. uterus, rectum)?

Q6

- A) Warming function
- B) Holding function
- C) Rising function
- D) Transporting function

Zōng Qì (Gathering/Ancestral Qì) is formed from:

Q7

- A) Kidney Essence + Pre-Heaven Qì
- B) Air (Qīng Qì) + Food (Gǔ Qì)
- C) Wèi Qì + Yíng Qì
- D) Yuán Qì + Shén Qì

Blood Deficiency and Qì Stagnation are best differentiated by which pair of features?

Q8

- A) Fixed pain vs moving pain; pale tongue vs red-sided tongue
- B) Purple tongue vs pale tongue; stabbing pain vs distension
- C) Rapid pulse vs wiry pulse; heavy menstrual flow vs scanty periods
- D) Choppy/Fine pulse vs Wiry pulse; pale thin dry tongue vs normal or red-sided tongue

Pitting edema that starts in the lower body (legs and ankles) and spreads upward is most likely caused by deficiency of:

Q9

- A) Lung Yáng
- B) Spleen Yáng
- C) Kidney Yáng
- D) Qì Stagnation

A patient has: dull-white sallow complexion, blurred vision, poor memory, numbness in limbs, insomnia, depression, scanty periods. Tongue: pale, thin, slightly dry. Pulse: Choppy and Fine. The BEST diagnosis is:

Q10

- A) Qì Deficiency
- B) Blood Deficiency
- C) Yīn Deficiency
- D) Kidney Essence Deficiency

Yuán Qì (Source/Original Qì) is said to exit the body through:

Q11

- A) Bāng Huì Points (GV-20)
- B) Back-Shū Points (Bèi Shū Xué)
- C) Source Points (Yuán Xué 原穴)
- D) Front-Mù Points (Mù Xué)

In Prof. Schrier's candle analogy, which vital substance does the flame represent?

Q12

- A) Jīng (Essence)
- B) Xuè (Blood)
- C) Qì (Vital Force)
- D) Shén (Spirit)

A patient with Qì Stagnation would be MOST likely to report which of the following?

Q13

- A) Fixed stabbing pain, dark complexion, purple nails
- B) Feeling of distension, irritability, frequent sighing, moving pain
- C) Fatigue, weak voice, loose stools, spontaneous sweating
- D) Night sweats, heat in five palms, dry mouth at night

The Five Shén associated with the Kidney is:

Q14

- A) Hún 魂 — Ethereal Soul
- B) Zhì 志 — Willpower
- C) Yì 意 — Intellect
- D) Pò 魄 — Corporeal Soul

The PRIMARY root cause of Phlegm formation in EAM is:

Q15

- A) Lung Yīn deficiency
- B) Kidney Yáng deficiency
- C) Spleen deficiency
- D) Heart Fire

Jīn (津) and Yè (液) differ in that Jīn is:

Q16

- A) Turbid, heavy, and moistens joints and bone marrow
- B) Clear, light, and circulates with Wèi Qì on the exterior
- C) Dense, slow, and controlled by the Spleen and Kidneys
- D) Closely related to Yíng Qì and circulates inside vessels

A dying patient suddenly seems bright-eyed, speaks clearly, and asks for food after days of unconsciousness. This is MOST likely:

Q17

- A) Genuine recovery due to correct treatment
- B) False Shén (假神) — a terminal sign of Yīn-Yáng separation
- C) Having Shén (有神) — a sign of strong vital force
- D) Qì Stagnation resolving

Blood Stasis in the Heart would MOST characteristically present with:

Q18

- A) Epigastric pain; vomiting dark blood; purple tongue in center
- B) Purple lips; stabbing chest pain; purple tongue toward front; distended sub-lingual veins
- C) Painful periods with dark clots; purple nails; purple tongue on sides
- D) Coughing dark blood; chest oppression; purple tongue on sides toward front

Section B — Eight Principles · Multiple Choice

Questions 19–36

In EAM, the differentiation of Interior vs Exterior is based on:

Q19

- A) The etiology (cause) of the disease
- B) The duration of the disease
- C) The location of the disease

The Yáng Míng channels weakening, face beginning to wither, and hair starting to fall occurs in females at age:

Q28

- A) 28
- B) 35

D) Whether a pathogenic factor is present

A "Full" (Excess/實) pattern in EAM means:

Q20

A) Excess of Zhèng Qì (Righteous Qì)
B) A pathogenic factor is present in the body
C) Deficiency of Yīn energy
D) Hyperactivity of Yáng

Empty Heat (虛熱) is distinguished from Full Heat (實熱) by which characteristic?

Q21

A) Full Heat causes malar flush only; Empty Heat causes whole-face redness
B) Empty Heat causes malar flush, afternoon/evening timing, night sweats, and peeled tongue
C) Full Heat causes night sweats and heat in five palms
D) Empty Heat causes profuse bleeding and high fever all day

The pulse and tongue for Empty Heat (Yīn Deficiency Heat) are:

Q22

A) Full-Rapid pulse; Red tongue with yellow coating
B) Floating-Empty-Rapid pulse; Red, Peeled tongue (no coating)
C) Deep-Slow-Weak pulse; Pale tongue with thin white coat
D) Tight-Deep pulse; Pale tongue with thick white coat

A patient has: aversion to cold, fever, no sweating, severe body aches, tight pulse, thin white tongue coat. What is the pattern?

Q23

A) Exterior Heat (Wind-Heat)
B) Exterior Cold (Wind-Cold) — Full
C) Interior Cold — Full
D) Exterior Cold — Empty (Deficiency)

True Cold — False Heat (真寒假熱) is differentiated from Empty Heat by:

Q24

A) The presence of night sweats in True Cold — False Heat
B) In False Heat, there is NO actual Heat — it is deceptive appearance; in Empty Heat, real (relative) Heat exists from Yīn deficiency
C) True Cold — False Heat presents with a red, peeled tongue
D) They are clinically identical — only the etiology differs

Which pulse quality is characteristic of Collapse of Yáng (extreme emergency state)?

Q25

A) Floating-Empty-Rapid
B) Minute-Deep
C) Wiry-Full
D) Slippery-Rapid

A patient with Interior Cold (Full) would have pain that is:

Q26

A) Dull, better with pressure, better with heat
B) Sharp, worse with pressure
C) Stabbing and fixed
D) Moving and distending

In the pattern "Cold on the Exterior, Heat in the Interior," a patient would MOST likely show:

Q27

A) Loose stools, chilliness, pale urine + sore throat, slight thirst
B) Fever, aversion to cold, no sweating, headache + irritability and thirst
C) Fever, aversion to heat, red face all day + aversion to cold, no thirst
D) Thirst, irritability, mouth ulcers above + borborygmus, loose stools below

C) 42
D) 49

An exterior pattern is ALWAYS characterized by what type of condition in terms of Full/Empty?

Q29

A) Always Empty, because the pathogen depletes Zhèng Qì
B) Always Full by definition (presence of pathogen + Zhèng Qì fighting)
C) Always mixed Full-Empty
D) Depends solely on whether there is sweating

Which tongue and pulse combination indicates an Interior condition?

Q30

A) Thin white coat; Floating pulse
B) Red tongue with yellow coat; Floating-Rapid pulse
C) Yellow/black coat, greasy; Deep pulse
D) Thin white coat; Floating-Tight pulse

Which of the following BEST describes Deficiency of Yáng (Empty Cold)?

Q31

A) Pain worse with pressure; bright-white face; thick white coat; Full-Tight pulse
B) Feeling cold; desiring warmth; pale urine; fatigue; weakness; pain improves with heat and pressure; Weak-Slow-Deep pulse
C) Malar flush; afternoon fever; night sweats; heat in five palms; peeled tongue
D) Fixed stabbing pain; purple tongue; Firm pulse

Low-pitched tinnitus that improves with rest is more characteristic of:

Q32

A) Excess/Full condition (pathogenic factor present)
B) Deficient/Empty condition (Zhèng Qì deficiency)
C) Exterior condition
D) Blood Stasis

In True Heat — False Cold (真熱假寒), which finding would you NOT expect?

Q33

A) Dark face; bright eyes; red-dry lips
B) Scanty dark urine; constipation; burning sensation in anus
C) Cold limbs but chest is hot; deep full pulse
D) Pale wet tongue; desire to lie curled up; quiet breathing; pale urine

Zōng Qì (Gathering Qì) deficiency would MOST likely manifest as:

Q34

A) Organ prolapse; bearing-down sensation; mental depression
B) Weak voice; reduced speech strength; shortness of breath (Lung function impaired)
C) Loss of bowel/bladder control; dizziness; tinnitus
D) Palpitations; insomnia; restlessness

Which of the following pairs is INCORRECTLY matched?

Q35

A) Hún → Liver → BL-47
B) Yì → Spleen → BL-49
C) Zhì → Kidney → BL-52
D) Pò → Heart → BL-44

Non-pitting edema is caused by:

Q36

A) Kidney Yáng deficiency
B) Spleen Yáng deficiency
C) Qì Stagnation or Dampness
D) Lung Yáng deficiency

Section C — Etiology & Pathogenesis · Multiple Choice

Questions 37–45

Which of the Six Exogenous Factors has NO endogenous (internally generated) form?

Q37

A) Wind (Fēng)
B) Fire (Huǒ)
C) Summer Heat (Shǔ)
D) Dampness (Shī)

Wind is considered the "leader" or "primary" pathogen because:

Q38

A) It is the most common cause of chronic disease
B) All other pathogenic factors (Cold, Damp, Heat, etc.) depend on Wind to invade the body
C) It directly injures Kidney Essence
D) It is the most severe Yang pathogen

Fire (Huǒ) stirs up Wind in the body. This manifests clinically as:

Q42

A) Profuse sweating; high fever; surging pulse
B) High fever, coma, convulsions of four limbs, neck rigidity, opisthotonos, upward staring eyes
C) Dry cough; constipation; scanty urine
D) Heavy sensation of body; turbid discharges; greasy tongue coat

Worry (思 Sī) injures which organ(s) and causes Qì to:

Q43

A) Lung; Qì disperses
B) Spleen and Heart; Qì stagnates
C) Kidney; Qì descends
D) Liver; Qì rises upward

Anger injures which Zang organ and causes Qi to move in what direction? Q39

- A) Heart; Qi slows
- B) Liver; Qi rises upward
- C) Spleen; Qi stagnates
- D) Kidney; Qi descends

Pathogenic Dampness is BEST described as: Q40

- A) A Yang pathogen that rises upward and consumes Yin fluids
- B) A Yin pathogen that is heavy, turbid, viscous, and tends to cause prolonged, intractable disease
- C) A pathogen that only occurs in summer and consumes Qi
- D) A pathogen that contracts the body and causes pain without sweating

Which of the following is a SECONDARY pathogen — meaning it is both a pathological product and a causative factor? Q41

- A) Wind-Cold
- B) Phlegm Fluid and Stagnant Blood
- C) Summer Heat
- D) Anger (Nu)

A patient who works outdoors in July collapses suddenly with high fever, profuse sweating, thirst, surging pulse, and loss of consciousness. The MOST likely pathogen is: Q44

- A) Fire (Huǒ) — internally generated
- B) Summer Heat (Shǔ) — exogenous
- C) Wind-Heat (Fēng-Rè)
- D) Dryness (Zào) with Heat

Excessive sexual activity in EAM primarily injures: Q45

- A) Lung Qi (respiratory weakness, cough)
- B) Spleen Qi (digestive impairment)
- C) Kidney Qi (lower back weakness, dizziness, tinnitus, reproductive dysfunction)
- D) Heart Qi (palpitations, insomnia)

Section D — Clinical Case Scenarios

Cases 1–12

How to approach cases: identify (1) Interior/Exterior, (2) Hot/Cold, (3) Full/Empty, (4) Yin/Yang, then narrow to specific pattern

Look for the unique distinguishing features — what makes this case different from similar ones?

CASE 1 — Pattern Identification

C1

A 45-year-old woman presents with fatigue, pale complexion, weak voice, spontaneous sweating, poor appetite, and loose stools. She works long hours and rarely sleeps more than 5 hours. Tongue: pale, normal body. Pulse: Empty.

What is the PRIMARY EAM diagnosis?

- A) Blood Deficiency
- B) Qi Deficiency (Lung and Spleen)
- C) Yin Deficiency
- D) Sinking Qi

CASE 2 — Pattern Differentiation

C2

A 38-year-old female reports stabbing pain in the lower abdomen that is fixed in location and constant. She has a history of endometriosis. Her periods are painful with dark blood and large clots. She also has a dull-white complexion and occasional blurred vision. Tongue: pale, slightly purple on the sides. Pulse: Choppy and Fine.

What TWO patterns are present simultaneously?

- A) Qi Stagnation + Heat in Blood
- B) Blood Deficiency + Blood Stasis (Liver)
- C) Yin Deficiency + Blood Deficiency
- D) Phlegm-Dampness + Qi Deficiency

CASE 3 — Eight Principles

C3

A 52-year-old male presents with: feeling hot in the afternoon and evening but not all day, malar flush (cheekbones only, not whole face), night sweats, dry mouth at night wanting only small sips of water, insomnia, and 5-palm heat (hands, feet, chest). Tongue: red and peeled (no coating). Pulse: Floating-Empty-Rapid.

This presentation is MOST consistent with:

- A) Full Heat (Interior Excess Yang)
- B) Empty Heat (Yin Deficiency)
- C) Full Cold transforming to Heat
- D) True Cold — False Heat

CASE 4 — Eight Principles

C4

A patient presents with: chilliness, cold limbs, weak breathing, profuse sweating with an oily quality, incontinence, and loose stools. The tongue is pale, wet, swollen, and short. The pulse is Minute and Deep.

This emergency pattern is:

- A) Collapse of Yin
- B) Collapse of Yang
- C) Interior Full Cold
- D) Deficiency of Yin (Empty Heat)

CASE 5 — Exogenous PathogenC5

A 29-year-old female woke up with sudden onset of fever, pronounced aversion to cold, severe body aches, severe stiff neck, no sweating, and no thirst. Tongue: thin white coat. Pulse: Floating-Tight.

The pathogen is:

A) Wind-Heat (Exterior Heat)

B) Wind-Cold Exterior Full

C) Interior Cold (Yáng Def)

D) Dampness

CASE 6 — Exogenous PathogenC6

A 42-year-old patient presents in August with sudden high fever, profuse sweating, extreme thirst, lassitude and reluctance to speak, dizziness, and surging pulse. History: worked outside in direct sun for 8 hours.

The primary pathogen is:

A) Fire (internally generated)

B) Wind-Heat

C) Summer Heat

D) Fire + Dampness

CASE 7 — EmotionsC7

A 33-year-old woman experiences frequent episodes of melancholy, crying, inability to let go of grief after a loss 2 years ago. She has spontaneous sweating, shortness of breath, and susceptibility to infections. Tongue: pale. Pulse: Fine and Weak.

The primary emotional pathogen and organ affected are:

A) Anger → Liver

B) Grief (悲) → Lung

C) Fear → Kidney

D) Worry → Spleen

CASE 8 — DifferentiationC8

A patient has: moving, distending abdominal pain that comes and goes; mental depression; irritability; frequent sighing; mood swings; pain worse with stress; normal or slightly red tongue on sides; Wiry pulse.

This is MOST consistent with:

A) Blood Stasis (Liver)

B) Liver Qì Stagnation

C) Blood Deficiency

D) Liver Fire

CASE 9 — ComplexC9

A 60-year-old male is critically ill. For 3 days he has been confused, unresponsive, with dim eyes and slow movement. Then suddenly he becomes completely alert, asks for food, has bright eyes and speaks clearly. The medical team thinks he is recovering.

A student of EAM would recognize this as:

A) Having Shén (有神) — positive prognosis

B) False Shén (假神) — terminal sign; Yīn-Yáng separating

C) Qì Stagnation resolving

D) Empty Cold resolving

CASE 10 — Secondary PathogensC10

A patient presents with: feeling of swelling and obstruction in the throat (like something stuck there) without any actual visible swelling, difficulty swallowing, oppression in the chest and diaphragm, irritability, depression. The pulse is Wiry.

This presentation is most characteristic of:

A) Misting Heart Phlegm (mania)

B) Qì Phlegm / Méi Hé Qì 梅核氣 (Plum-Pit Qì)

C) Wind Phlegm

D) Damp Phlegm

CASE 11 — Vital SubstancesC11

A 4-year-old boy has: poor bone development, soft skull bones, late closure of the fontanelle, significant developmental delay — not walking yet at age 4, dullness. His parents are healthy.

This presentation most closely matches:

A) Post-Heaven Essence deficiency from malnutrition

B) Pre-Heaven/Kidney Essence Deficiency (constitutional)

C) Blood Deficiency

D) Qì Sinking pattern

CASE 12 — Combined PatternsC12

A 48-year-old woman presents with: thirst and mouth ulcers (heat above), along with loose stools, borborygmus, and profuse pale urine (cold below). She has irritability and sour regurgitation.

This presentation describes which Eight Principles pattern?

A) Cold Exterior, Heat Interior

B) Full Heat (Interior)

C) Heat Above, Cold Below

D) True Cold — False Heat

Section E — True / FalseQuestions 1–20

Wèi Qì circulates inside the blood vessels and is activated during acupuncture needling.TF1

☐ True ☐ False

In Qì Stagnation, pain is more prominent than distension.TF3

☐ True ☐ False

Exterior patterns always originate from exterior pathogenic factors.TF5

☐ True ☐ False

Summer Heat is the only one of the Six Exogenous Factors with no endogenous form.TF7

☐ True ☐ False

Sinking Qì is an aspect of Qì Deficiency primarily affecting the Spleen.TF9

☐ True ☐ False

Fear (恐) causes Qì to rise upward, while Anger (怒) causes Qì to descend.TF11

☐ True ☐ False

False Shén (假神) is a sign of patient recovery and positive prognosis.TF13

☐ True ☐ False

Pitting edema that starts in the lower limbs and ankles is most characteristic of Spleen Yáng Deficiency.TF15

☐ True ☐ False

Pre-Heaven Essence can be significantly replenished through diet, herbs, and adequate rest.TF2

☐ True ☐ False

Blood Stasis pain is typically fixed in location, stabbing or boring in nature, and does not move.TF4

☐ True ☐ False

A "Full" pattern means there is too much Zhèng Qì in the body.TF6

☐ True ☐ False

Jīn fluids are heavy, dense, and turbid, circulating with Yíng Qì in the interior.TF8

☐ True ☐ False

Yuán Qì (Source Qì) exits the body through the Back-Shū acupuncture points.TF10

☐ True ☐ False

Phlegm and Stagnant Blood are secondary pathogens — they are both pathological products AND causative factors.TF12

☐ True ☐ False

Dampness is considered a Yīn pathogen that impairs Yáng and tends to cause prolonged, intractable disease.TF14

☐ True ☐ False

The Hún (魂) is the spirit associated with the Lung and dies when the body ceases to function.TF16

☐ True ☐ False

Wind is a Yáng pathogen primarily associated with spring that can combine with other pathogenic factors.

☐ True ☐ False

According to Sù Wèn Chapter 1, males experience their developmental cycles in multiples of 7.

☐ True ☐ False

Blood is the mother of Qì, meaning Blood nourishes the organs that produce Qì.

☐ True ☐ False

An exterior pattern can be correctly categorized as Interior if the symptoms affect the Internal Organs, even if it was caused by an external pathogen.

☐ True ☐ False

Section F — Fill in the Blank

Questions 1–8

The vital substance that is described as "the fabric of the universe" and the most refined substance, governing growth, reproduction, and development is: _____

F11

The Five Shén of the Kidney is called _____, associated with willpower and drive, and its outer Bladder point is _____.

F12

In EAM, "Full" means a _____ is present. "Empty" means a deficiency of _____.

F13

The root cause of all Phlegm formation is deficiency of the _____. "Spleen is the source; _____ is the container."

F14

The two hallmarks that distinguish Qì Stagnation (more _____) from Blood Stasis (more _____) are: Qì Stag = moving, distending; Blood Stasis = _____, stabbing/boring.

F15

Wèi Qì circulates _____ times per 24 hours (_____ times day + _____ times night), circulates _____ the blood vessels, in the _____ (腠理).

F16

The Six Exogenous Factor with NO endogenous form, occurring ONLY in summer, is _____ (漢字: _____). It is unique because _____.

F17

The Seven Emotion that causes Qì to rise, primarily injuring the _____, is _____ (漢字: _____). Its opposite in direction is Fear (恐), which causes Qì to _____.

F18

Answer Key — Complete with Explanations

Section A — Vital Substances (Q1–18)

- Q1. B** — Pre-Heaven Essence is fixed in qty & quality; cannot be replenished (only preserved)
Q2. B (Age 28) — Sù Wèn Ch. 1: at 28 (×7) sinews & bones strong, hair at full length, peak fertility
Q3. C (Yíng Qì) — Yíng Qì = Nutritive Qì, circulates inside vessels, the Qì activated by needling
Q4. B — Wèi Qì: 50×/24h (25 day, 25 night); outside vessels, in Còu Lǐ
Q5. C (Blood Stasis, Liver) — Fixed stabbing pain, dark clots, purple tongue on sides = Liver Blood Stasis
Q6. C (Rising) — Rising function holds organs in their anatomical position; Holding = prevents leaking fluids/blood
Q7. B — Zōng Qì = Air Qì (Qīng Qì) + Food Qì (Gǔ Qì); stored in chest
Q8. D — Blood Def: Choppy/Fine pulse, pale thin dry tongue; Qì Stag: Wiry pulse, normal/red-sided tongue
Q9. C (Kidney Yáng) — KD Yáng def → edema starts lower body (legs/ankles). SP → abdomen. LU → face/hands.

- Q10. B (Blood Deficiency)** — Classic signs: dull complexion, blurred vision, poor memory, numbness, insomnia, scanty periods, pale thin dry tongue, Choppy/Fine pulse
Q11. C (Source Points 原穴) — Yuán Qì stored at Míng Mén, distributes via San Jiāo, exits at Source Points
Q12. C (Qì) — Candle: Jīng = wax & wick; Qì = flame; Shén = light cast
Q13. B — Qì Stagnation: distension > pain; moving; irritability; sighing; wiry pulse
Q14. B (Zhì 志) — Kidney = Zhì (willpower, drive, courage). BL-52 Gate of Will Power
Q15. C (Spleen) — "Spleen is the source of Phlegm; Lungs are the container"
Q16. B — Jīn = clear, light, with Wèi Qì on exterior; Yè = turbid, heavy, with Yíng Qì in interior
Q17. B (False Shén) — Sudden revival in critically ill = terminal sign; Yīn-Yáng separating. NOT recovery.
Q18. B — Heart Blood Stasis: purple lips, stabbing chest pain, mental restlessness, purple tongue toward front, distended sub-lingual veins, choppy/knotted pulse

Section B — Eight Principles (Q19–36)

- Q19. C (Location)** — Interior vs Exterior = LOCATION of disease, NOT its cause (etiology). Critical exam rule.
Q20. B — Full = presence of pathogenic factor (NOT excess Zhèng Qì)
Q21. B — Empty Heat: malar flush only, afternoon/evening timing, night sweats, 5-palm heat, peeled tongue
Q22. B — Empty Heat: Floating-Empty-Rapid pulse; Red Peeled tongue (no coat)
Q23. B — Floating-Tight pulse, no sweating, no thirst, severe aches = Exterior Cold (Wind-Cold) Full
Q24. B — False Heat: no actual Heat exists (deceptive). Empty Heat: real relative Heat from Yīn deficiency
Q25. B (Minute-Deep) — Collapse of Yáng: Minute-Deep pulse; pale wet swollen short tongue
Q26. B (worse with pressure) — Full Cold = excess Yīn; pain sharp and worse with pressure (Full pattern rule)
Q27. B — Cold Exterior + Heat Interior: fever + aversion to cold + no sweating + headache (Cold) WITH irritability + thirst (Interior Heat)
Q28. B (Age 35) — Sù Wèn: at 35 (×7) Yáng Míng channels weaken, face withers, hair starts falling
Q29. B — Exterior patterns are always Full by definition (pathogen present + Zhèng Qì fighting it). But can be relatively Empty vs Full.
Q30. C — Interior: yellow/black or greasy coat + Deep pulse. Exterior: thin white coat + Floating pulse
Q31. B — Yáng Def (Empty Cold): feeling cold, desiring warmth, pale urine, fatigue, pain improves with heat and pressure, Weak-Slow-Deep pulse
Q32. B (Deficient) — Low-pitched tinnitus, improves with rest = Empty/Deficient. High-pitched, worse with pressure = Full/Excess
Q33. D — Pale wet tongue, curled up position = True Cold — False Heat. Choice D describes True Cold — False Heat, NOT True Heat — False Cold.
Q34. B — Zōng Qì stored in chest; controls speech & voice strength. Def → weak voice, reduced speech strength, SOB
Q35. D — Pò (魄) is the Lung spirit (BL-42), NOT the Heart. Shén (神) = Heart (BL-44).
Q36. C — Non-pitting = Qì Stagnation or Dampness. Pitting = Yáng def (SP, LU, or KD)

Section C — Aetiology (Q37–45) · Section D — Cases · Sections E & F

- Q37. C (Summer Heat)** — Only Summer Heat has no endogenous form; occurs summer only
- Q38. B** — Wind is primary: all other pathogens depend on Wind to invade. Plain Questions Ch. 42. go
- Q39. B (Liver; Qì rises)** — Anger → Liver; Qì rises upward
- Q40. B** — Dampness: Yīn pathogen; heavy, turbid, viscous, stagnant; prolonged & intractable disease
- Q41. B** — Phlegm & Blood Stasis are secondary pathogens (product AND cause)
- Q42. B** — Fire stirs Wind: high fever + convulsions, neck rigidity, opisthotonos, upward staring eyes
- Q43. B (Spleen & Heart; Qì stagnates)**
- Q44. C (Summer Heat)** — Seasonal, outdoor, high fever, surging pulse, profuse sweating, thirst, collapse
- Q45. C (Kidney Qì)** — Excessive sexual activity injures Kidney Qì

Cases:

- C1. B** — Qì Deficiency (LU & SP): fatigue, weak voice, poor appetite, loose stools, spontaneous sweating, empty pulse
- C2. B** — Blood Deficiency (pale thin dry tongue, choppy/fine pulse, blurred vision) + Blood Stasis Liver (fixed stabbing, dark clots, purple on sides)
- C3. B** — Classic Empty Heat: malar flush, afternoon heat, night sweats, 5-palm heat, dry mouth at night (small sips), peeled tongue, Floating-Empty-Rapid
- C4. B** — Collapse of Yáng: oily cold sweat, cold limbs, incontinence, Minute-Deep pulse, pale wet swollen short tongue
- C5. B** — Wind-Cold Exterior Full: no sweating, no thirst, severe aches, Floating-Tight, thin white coat
- C6. C** — Summer Heat: outdoor work in July, surging pulse, concurrent Qì def (lassitude)

- C7. B** — Grief (悲) injures Lung: SOB, spontaneous sweating, susceptibility to illness, inability to let go
- C8. B** — Liver Qì Stagnation: moving distending pain, irritability, sighing, stress-related, Wiry pulse, red-sided tongue
- C9. B** — False Shén: terminal sign. Sudden revival in critically ill = Yīn-Yáng separating. NOT recovery.
- C10. B** — Qì Phlegm / Méi Hé Qì 梅核氣 (Plum-Pit Qì): throat obstruction (non-substantial), no visible swelling, Wiry pulse
- C11. B** — Kidney Essence (Pre-Heaven) Deficiency: constitutional, presents in children as bone/developmental issues
- C12. C** — Heat Above, Cold Below: heat rising (thirst, ulcers, irritability above) + cold descending (loose stools, borborygmus, pale urine below)

True / False:

- TF1 FALSE** — Yíng Qì (not Wèi) circulates inside vessels; Wèi circulates outside
- TF2 FALSE** — Pre-Heaven fixed, CANNOT be replenished; only Post-Heaven can
- TF3 FALSE** — Qì Stagnation: MORE DISTENSION than pain. Blood Stasis: more pain than distension
- TF4 TRUE** — Blood Stasis = fixed, stabbing/boring, does not move
- TF5 FALSE** — Exterior pattern is defined by LOCATION, not etiology. Interior organs can cause exterior symptoms.
- TF6 FALSE** — Full = presence of pathogenic factor (Xié Qì), NOT excess Zhèng Qì
- TF7 TRUE** — Summer Heat only in summer; no endogenous form
- TF8 FALSE** — That describes Yè (液). Jīn is clear, light, and circulates with Wèi Qì on the exterior
- TF9 TRUE** — Sinking Qì = aspect of Qì Def; primary organ = Spleen (Zhōng Qì/Central Qì)
- TF10 FALSE** — Yuán Qì exits at Source Points (原穴), not Back-Shū Points
- TF11 FALSE** — REVERSED. Anger → Qì rises. Fear → Qì descends.
- TF12 TRUE** — Secondary pathogens = product AND cause
- TF13 FALSE** — False Shén = TERMINAL SIGN; Yīn-Yáng separating. NOT recovery.
- TF14 TRUE** — Dampness: Yīn pathogen, impairs Yáng, prolonged disease
- TF15 FALSE** — Lower body edema = Kidney Yáng def. Spleen = abdomen → four limbs. Lung = face/hands.
- TF16 FALSE** — Pò (魄) = Lung spirit that dies with body. Hún (魂) = Liver spirit that enters/leaves at birth/death.
- TF17 TRUE** — Wind: Yáng, spring, combines with other pathogens, "leader of all pathogens"
- TF18 TRUE** — Blood is the mother of Qì: Blood nourishes organs that produce Qì
- TF19 FALSE** — REVERSED. Females = cycles of 7. Males = cycles of 8.
- TF20 TRUE** — Correct. Location determines Interior/Exterior. If External pathogen reaches Internal Organs = Interior pattern.
